

Natural Ingredient Profile: Organic Shea Fruit Butter

Description: This plant butter is produce from the nuts of the large Karite tree in West Africa. Some clinical observations suggest that Shea Butter increases local blood circulation in the skin, improving the elimination of waste products. Other studies suggest that Shea Butter helps to improve the elasticity of the skin, making it a valuable addition to products for all skin types. The unsaponifiables and cinnamic esters in Shea Butter give it anti-microbial and moisturising properties and provide light protection against UV rays of the sun.
